

2. Furniture production technology

ISKRA

With Iskra Technology you can quickly create a complete piece of box furniture without using a ruler or a pencil. You will install any type of furniture fasteners that require drilling round holes, achieving very high precision of matched elements. The attractively priced technology is available to everyone and enables the production of furniture sold in packages. A wide range of accessories and a specially dedicated table create a complete workplace.

3. Z1 Single-layer fabric cutter

Gerber Technology

The GERBER Z1 cutter is a digitally controlled, automated cutting system for fabrics of the latest generation. The device is an optimal solution for single-layer cutting of a wide range of difficult upholstery, composite and technical materials. In order to achieve the best efficiency and effectiveness, GERBER Z1 has been equipped with a number of unique functions improving the cutting process and giving additional possibilities of continuous work, preview of the cut layout and optional optical systems used during cutting patterned and printed materials.

4. VACO MAX Jet Dust Collector

NAWARA SERWIS s.c. Marzena i Rafał Nawara

VACOMAX jet dust collector is dedicated to tasks related to the extraction of wood waste directly at a specified point, which is guaranteed by its quality and safety, and which simply pays off. High efficiency as well as high air filtration parameters make the dust collector an eco-innovative product.

5. 1325 ATC Milling Plotter

POLSKA GRUPA CNC Damian Laskowski

A device for processing engineering materials ensuring ergonomics, space saving and easy transport while maintaining all technical properties. Our ATC plotter is an innovative solution by integrating the console and the control cabinet in a single solid. This series features an additionally reinforced structure and AC servo drives on each axis. The use of light and durable metal alloys ensures greater machine dynamics. These solutions create a very competitive product at an affordable price.

6. LED-UV EFI PRO 16H Plotter

ATRIUM Centrum Ploterowe Sp. z o.o.

The EFI Pro 16h hybrid plotter has been designed to guarantee a competitive investment cost and low operating costs, without losing the unrivalled print quality and extensive possibilities of printing on various materials such as furniture boards, mdf, plywood, glass, plexiglass, ceramics, concrete and many others. The machine is used in the furniture and interior design industry due to the high demand for space personalisation. Thanks to the hybrid structure, we can print on flexible and rigid materials with a width of up to 165 cm and thickness of up to 5 cm. The ink used in the plotter is fully eco-friendly and has the GreenGuard Gold certificate.

7. A robotic line for the production of custom-made furniture for small and medium-sized companies

INFOTEC CNC Sp. z o.o., Poznań

InfoTEC FACTORY – a robotic line for the production of custom-made furniture up to the assembly stage. The InfoTEC FACTORY digital environment is dedicated to small and medium-sized furniture manufacturers who strive for fully automatic and flexible production. InfoTEC FACTORY can be implemented in the existing production process in stages, which allows you to spread the investment over time and gradually get rid of traditional production methods.
